

AI Hackathon

AI for the Environment Hackathon Festival

ArcGIS GeoAI information and tools

Geographic Information Systems (GIS) are powerful tools used to gather, manage, and analyze data, integrating various types of information based on their geographical locations.

GIS technology combines spatial data (location information) with attribute data (information about the locations) to provide valuable insights, enabling better decision-making across various fields like urban planning, environmental management, transportation, and healthcare.

StoryMap which contains all of the information (what is GIS, how to use ArcGIS, how to access public data) for using the ArcGIS GeoAI tools for this Hackathon.
